With over thirty years of working in special effects shops, I know good tools when I see them, and I know that the right tool can get a job done better in a fraction of the time than something that is mediocre. Don’t get me wrong- give me just a hammer and I’ll build you anything you want. But you can’t beat a perfectly designed and manufactured tool.

I first saw a BuildPro welding table a couple of months ago at Tech Shop in San Francisco, and I had to have one. The design is ingenious, but this is no ‘gadget’ - while solid as a rock, it is flexible enough to accommodate and lock down anything you can fit on it. And as any experienced welder knows, jigging things solidly before welding is crucial if you want to do a neat, professional job that doesn’t warp from the weld stresses. And you can spend more time jigging a workpiece down properly than actually putting it together. Not with this table and the accessories though-they thought of everything: nitrided surfaces that weld splatter won’t stick to, sectioned plates that come off easily if you need clearance, and every imaginable clamp and hold down that can socket cleanly into the hundreds of machine perfect holes. They are designed so that adjustments are instant, and will accommodate any configuration. There is nothing else like it out there- all you have to do is look at one and you’ll understand.”

BUILDPRO
TESTIMONIAL

“With our BuildPro MAX Table, our work is more precise, fast, and accurate.”

Jiri Poliacek
CNC Art Cut
Torrance, CA

“With the BuildPro Table, the setup and take down of fixtures can be done very quickly for most of the configurations we weld. One of the biggest benefits we’ve found; we don’t have to make and store near as many dedicated weld fixtures for the many different configurations we weld.”

Gary Knap
